

COVID-19 Vaccination: Making an Informed Decision

An E-Learning Presentation for Seven Generations Education Institute

Purpose

01

To provide information about COVID-19 vaccination, and to further help you make an informed decision about receiving or not receiving the vaccine.

02

We are committed to doing whatever it takes to keep our staff, students, and community safe.

03

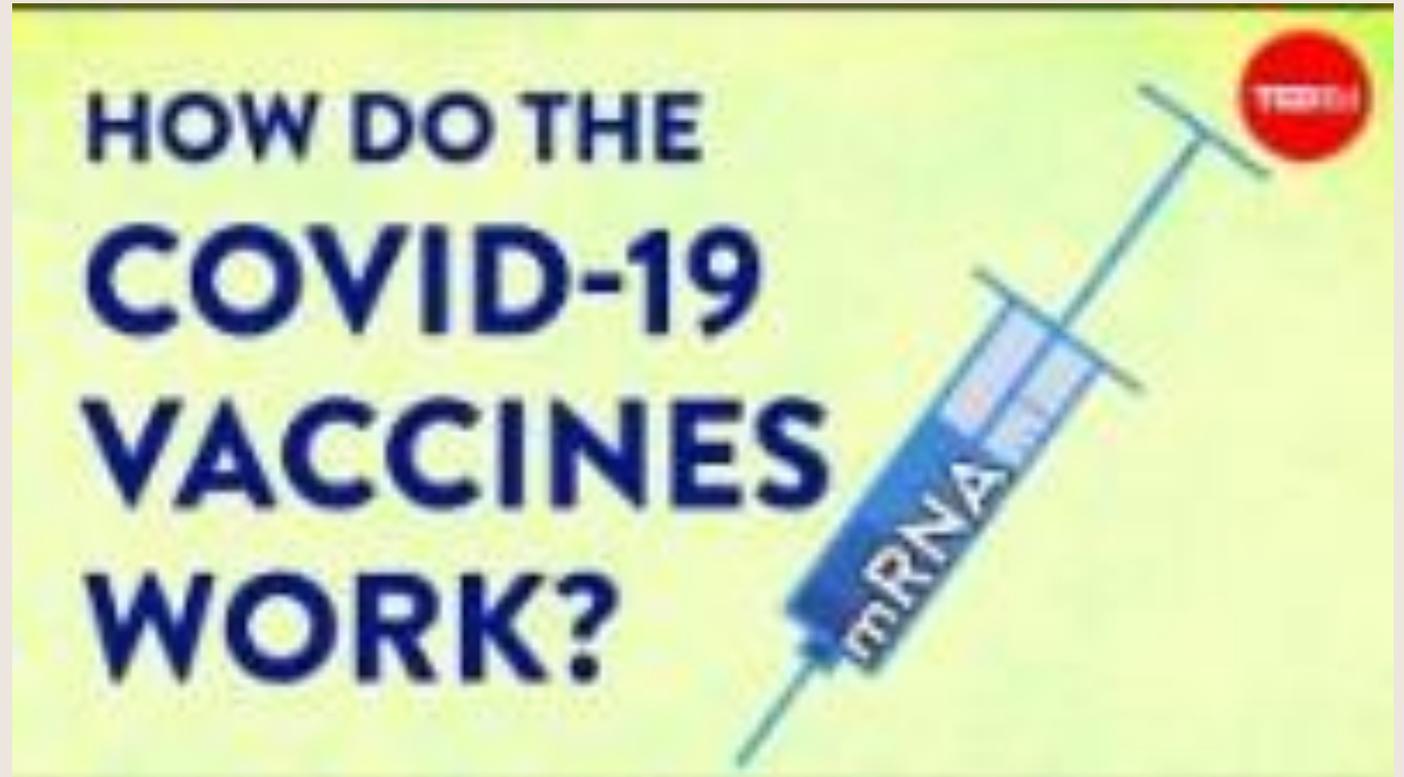

Along with existing measures, the COVID-19 vaccine is the most effective way to prevent COVID-19 infection.

How do COVID-19 mRNA Vaccines Work?

[How vaccines work against COVID-19: Science, Simplified - YouTube](#)

Vaccine Safety & Development

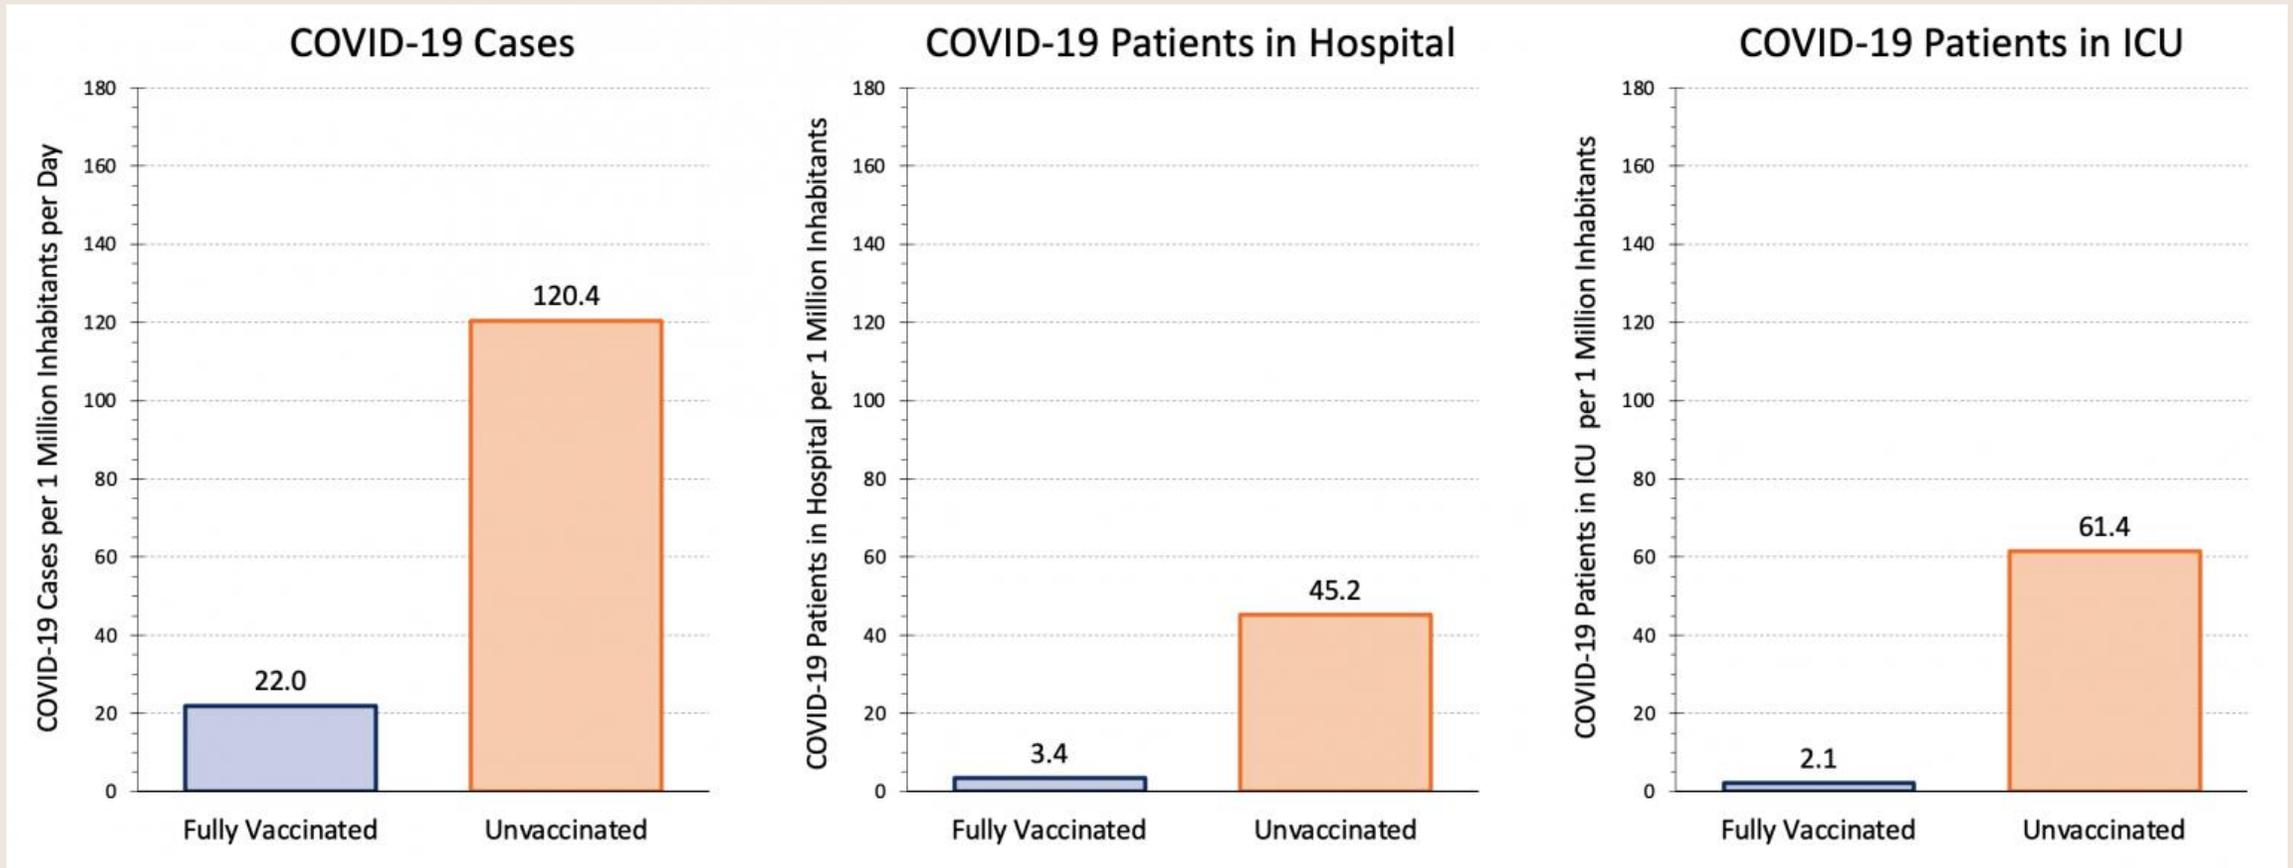

[How the COVID-19 vaccines were created so quickly - Kaitlyn Sadtler and Elizabeth Wayne - YouTube](#)

Health Benefits of Vaccination

- Evidence shows that vaccines are highly effective at preventing severe illness, hospitalization and death from COVID-19, including against alpha and delta variants of concern.
- People who are fully vaccinated with an mRNA vaccine are less likely to have symptomatic (or asymptomatic) infection or to transmit SARS-coV-2 to others.
- People who have been fully vaccinated with a viral vector vaccine (AstraZeneca) are less likely to have symptomatic infection or to transmit SARS-CoV-2 to others.

COVID-19 Risk Based on Vaccination Status

Vaccine Side Effects:

Common side effects of the vaccine can last from a few hours to a few days, and may include:

- Pain, redness, and swelling at injection site
- Fatigue
- Headaches
- Muscle aches
- Fever
- Allergic reactions are rare, but they do happen and can be severe. Speak with your health care provider about any serious allergies or health conditions you may have before you get a vaccine.

Becoming Fully Vaccinated

- ✓ You are considered fully vaccinated 2 weeks after your second dose in a 2-dose series, such as the Pfizer-BioNTech or Moderna vaccines.
- ✓ If you have received 1 dose of a 2-dose series, you're considered partially vaccinated.
- ✓ Completing your vaccine series is important as the effectiveness of a vaccine series increases after the second dose.
- ✓ Being fully vaccinated means you will have good protection against infection, including against most current variants of concern. However, as vaccines are rarely 100% effective, a small number of fully vaccinated people may become infected with or without symptoms. As a result, you may still be asked to get a COVID-19 test.

COVID-19 Vaccination Record Card

Record card, which includes medical information about the vaccine(s) you have received.
Tarjeta de registro, que incluye información sobre la(s) vacuna(s) que ha recibido.

Vaccination Declaration

Your vaccination status will not affect your education or employment opportunities at Seven Generations Education Institute. However, if you choose not to receive or declare COVID-19 vaccination status, or if you are only considered 'partially vaccinated', you will be required to follow the antigen testing requirements as outlined in our organization's vaccine policy.
